Using RVChat with email

Using your own email program

- You can send a message to the group right from your own email program
- You can also reply to messages using various options
- For most people, this will be your primary (or even only) way of interacting with RVChat. You never have to learn about other features

sprouts
I've recently gotten back into sprouting again. So far I've done radish and broccoli sprouts... love both of them! Does anyone else have any favorites? I want to use them raw in salads.

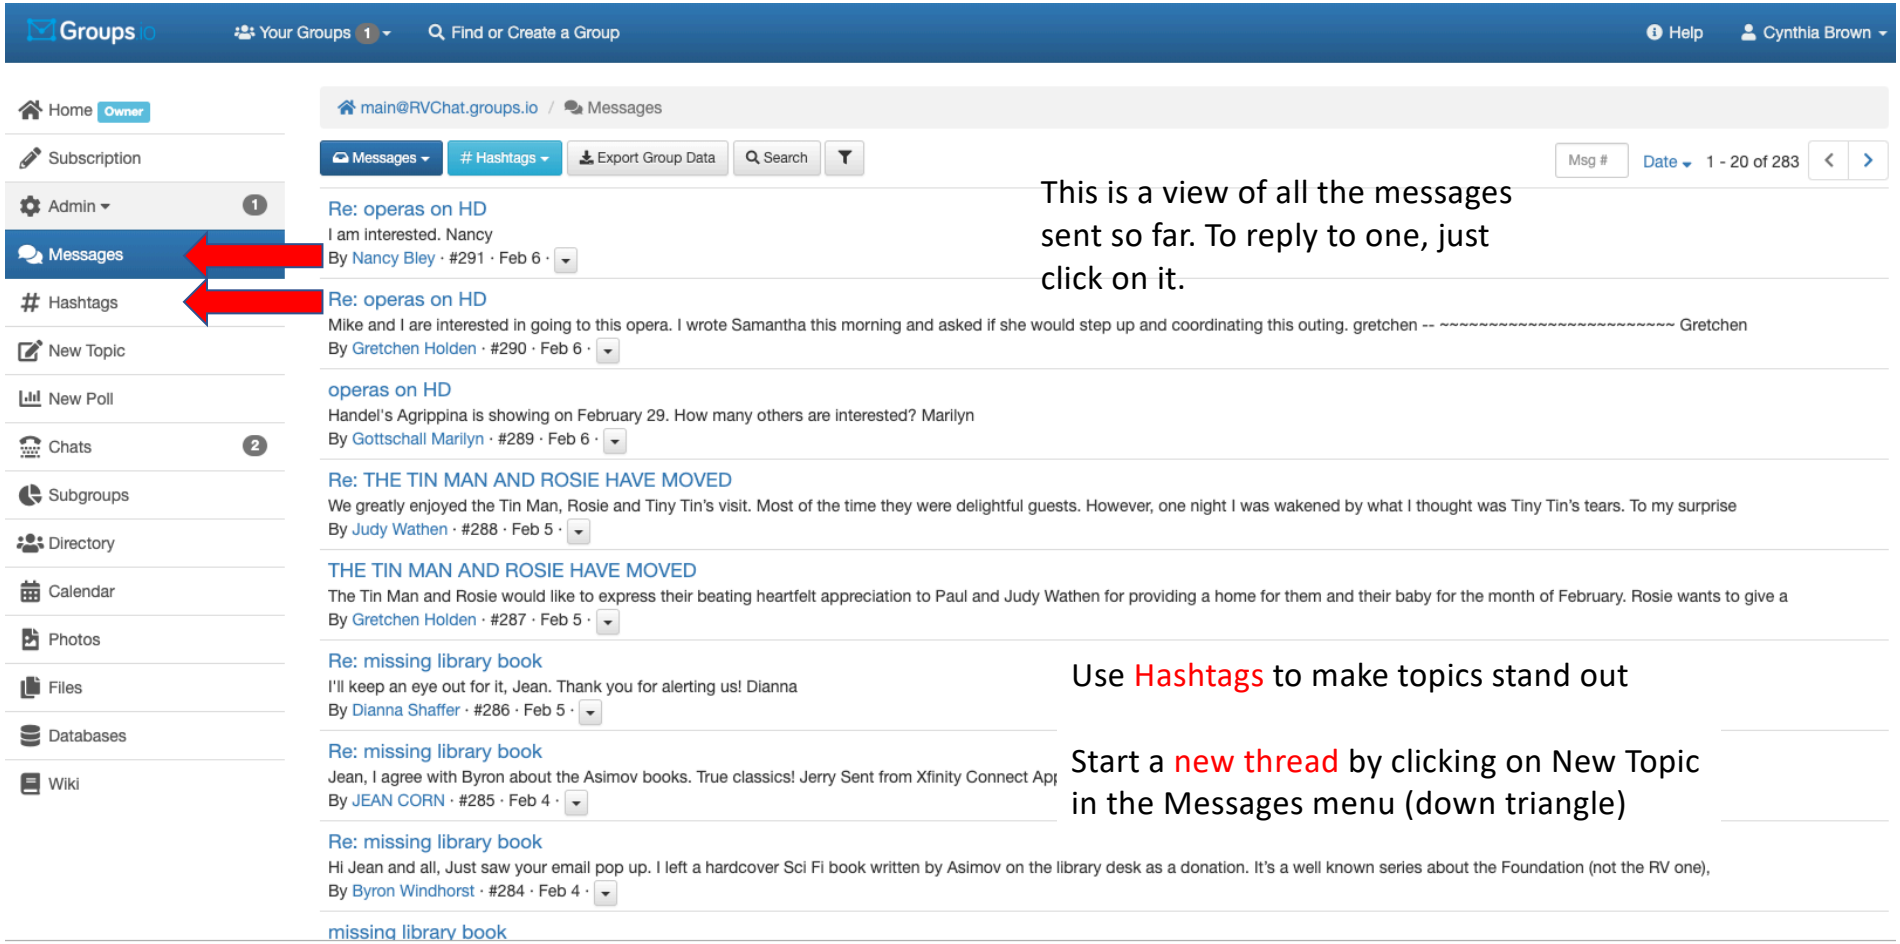
And others

Message “Etiquette”

- Try not to overload the system with messages that are not of general interest.
- If you send a message looking for help with something, it should go to the whole group (I lost my phone!)
- When your issue is resolved, send another message to let everyone know (I found it!)
- Other messages addressing the issue should usually just go to the sender unless there is a reason why everyone needs to see it
- Avoid “courtesy” messages like “Glad you found it” or send them individually, not to the whole group

More on messages…

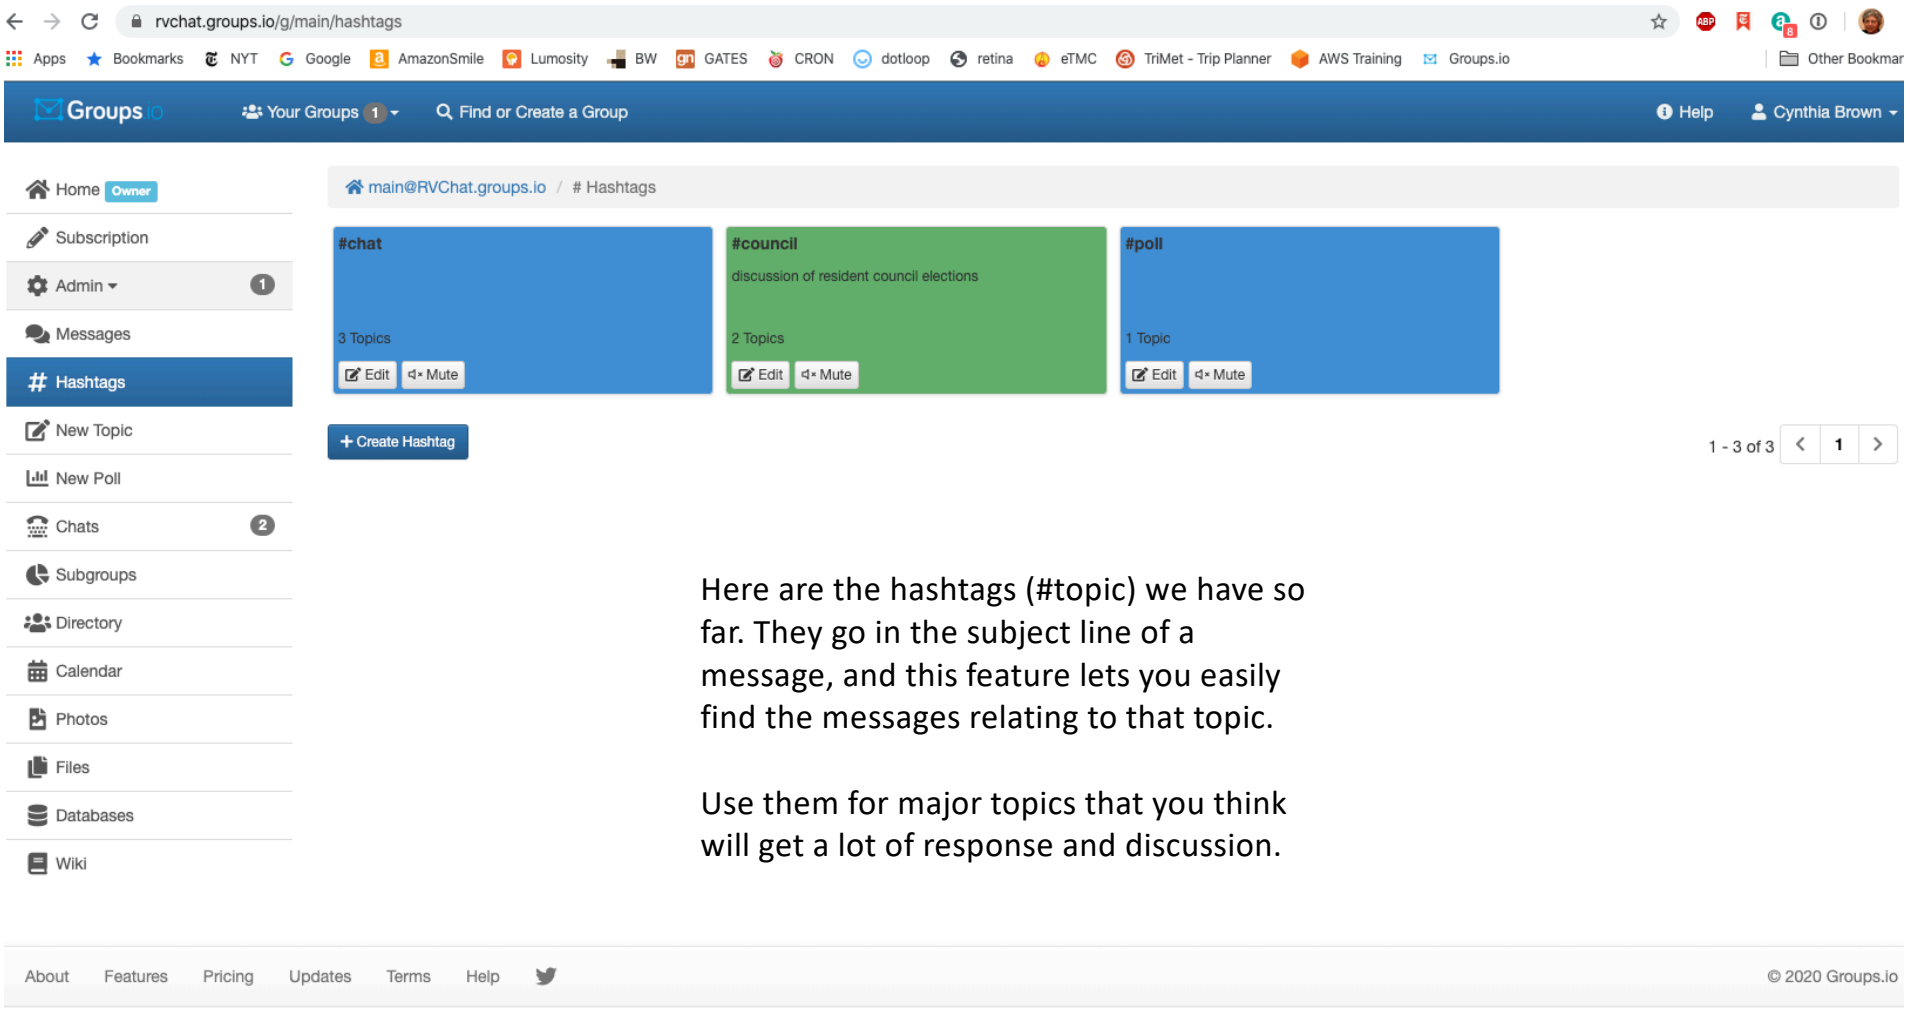
- You may never need to go to the actual RVChat site once you are signed up. You can start and reply to messages, mute topics, and more from your email
- But you can also start a new message thread from the site by going to the site and then to the Messages area using the left-side menu



This is a view of all the messages sent so far. To reply to one, just click on it.

Use Hashtags to make topics stand out

Start a new thread by clicking on New Topic in the Messages menu (down triangle)



Here are the hashtags (#topic) we have so far. They go in the subject line of a message, and this feature lets you easily find the messages relating to that topic.

Use them for major topics that you think will get a lot of response and discussion.
